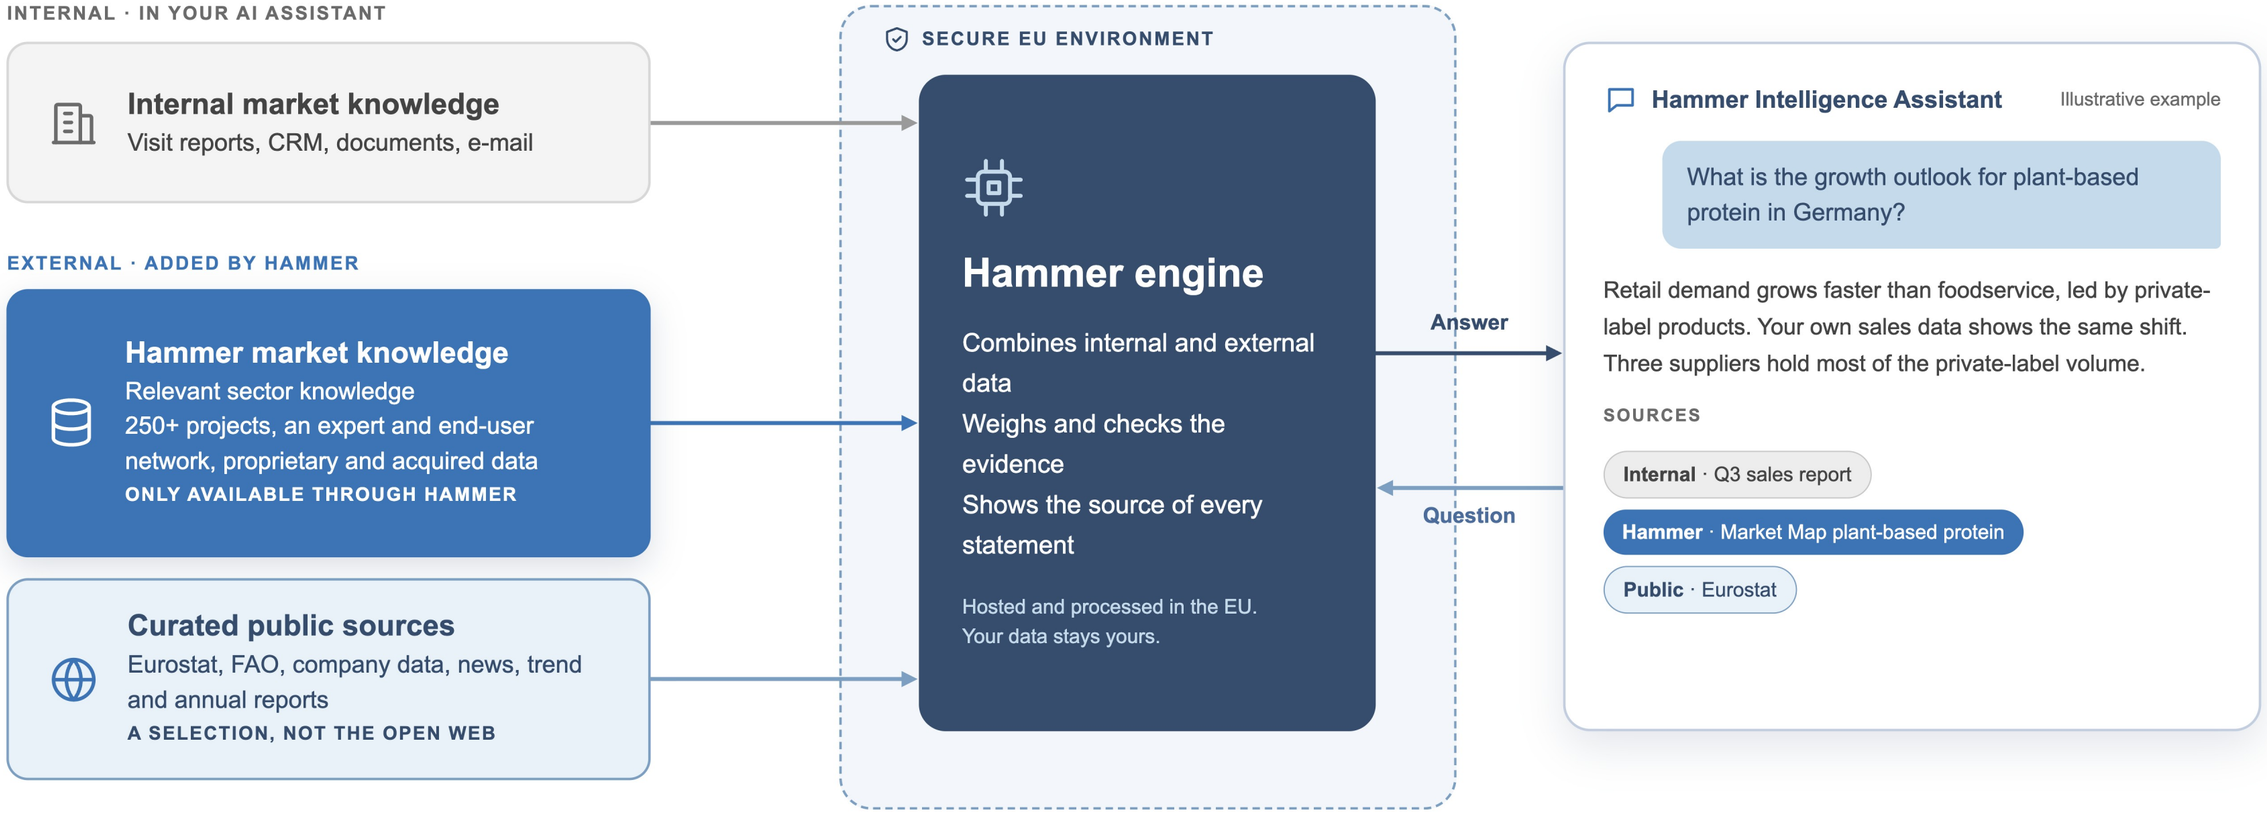
HAMMER INTELLIGENCE ASSISTANT

Outperform competitors with market intel at your fingertips

Curated, accurate and complete market intelligence, connected to the AI assistant you already use or delivered as a fully EU-sovereign system.

1. **Safe and secure**
   Hosted and processed in the EU, your data stays yours.
2. **Internal and external data in one answer**
   Easy coupling with the systems you already use.
3. **Curated by market intelligence experts**
   Sources selected and maintained by Hammer.



10+ years of market intelligence · 250+ projects · 75+ clients

HAMMER market intelligence

HOW IT WORKS

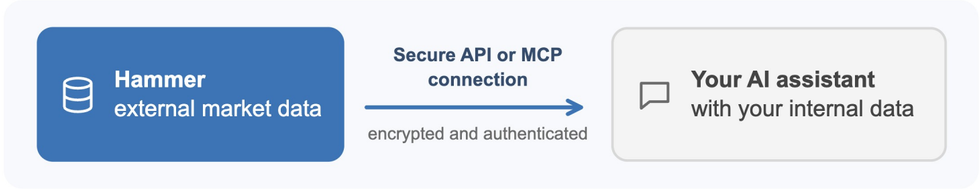
Two ways to add Hammer market data to your organization

Hammer connects to the AI assistant you already use, or delivers a fully EU-sovereign system.

1 OPTION 1 · CONNECT

You already use an AI assistant

For organizations that use Microsoft Copilot or a similar assistant for their internal data. Hammer plugs into that system and adds the external market view.



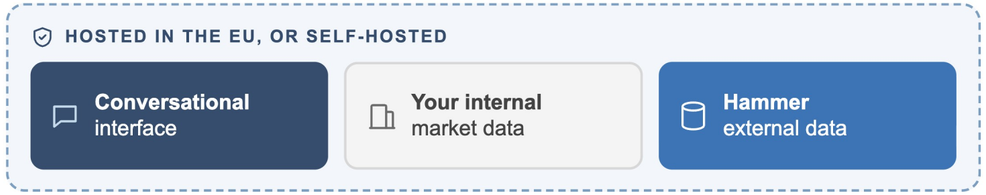
- Connects through a secure API or MCP, the open standard for AI tools
- Encrypted traffic and authentication per organization
- Your internal documents stay in your own environment
- Your team keeps working in the tool it already knows

Result: your current assistant answers market questions with Hammer's external data, sources included.

2 OPTION 2 · EU-SOVEREIGN SYSTEM

You prefer an EU-sovereign system

For organizations that do not have, or do not want, an American AI assistant. Hammer delivers the whole system on EU-sovereign infrastructure.



- Complete system by Hammer, with a custom conversational interface
- Connectors to your internal data: visit reports, CRM and documents
- Hosted in the EU, or self-hosted on your own infrastructure
- Full control over access rights and data storage

Result: one secure, EU-sovereign environment for all your internal and external market questions.

We assess your current setup with you and advise which option fits best.
